

H2O Driverless Al

Automatic Machine Learning for the Enterprise

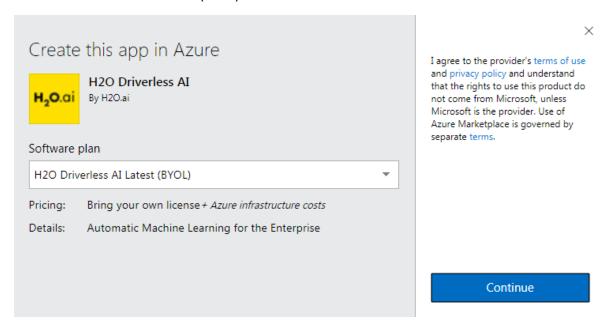

H2O Driverless AI is an artificial intelligence (AI) platform that automates some of the most difficult data science and machine learning workflows such as feature engineering, model validation, model tuning, model selection, and model deployment. It aims to achieve highest predictive accuracy, comparable to expert data scientists, but in much shorter time thanks to end-to-end automation. Driverless AI also offers automatic visualizations and machine learning interpretability (MLI). Especially in regulated industries, model transparency and explanation are just as important as predictive performance.

Highlights:

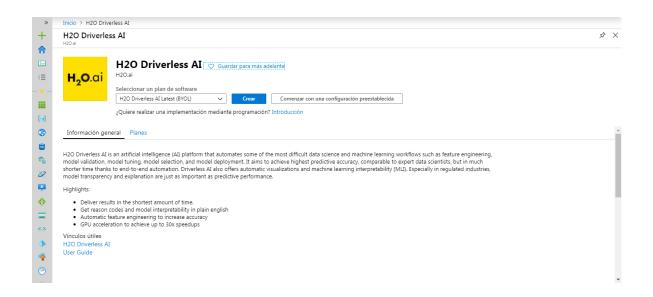

- Deliver results in the shortest amount of time.
- Get reason codes and model interpretability in plain english
- Automatic feature engineering to increase accuracy
- GPU acceleration to achieve up to 30x speedups

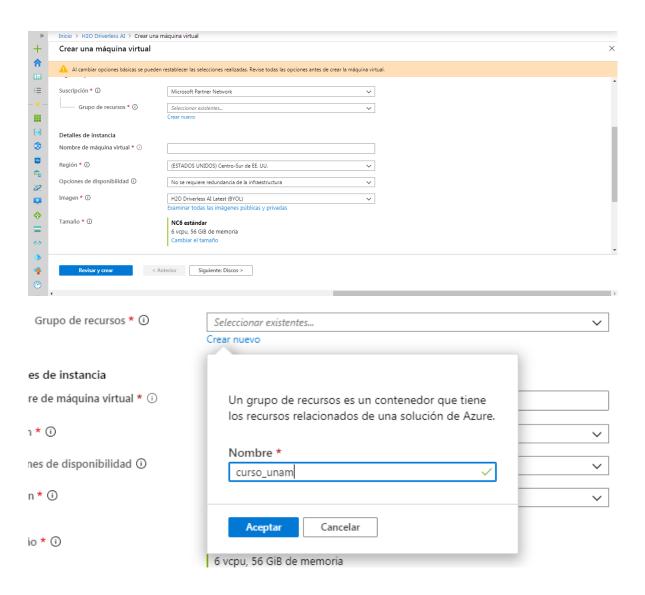

Select H2O Driverless AI Latest (BYOL)

In the Azure portal click on the create button

Create a new resource group and assign a name to the VM

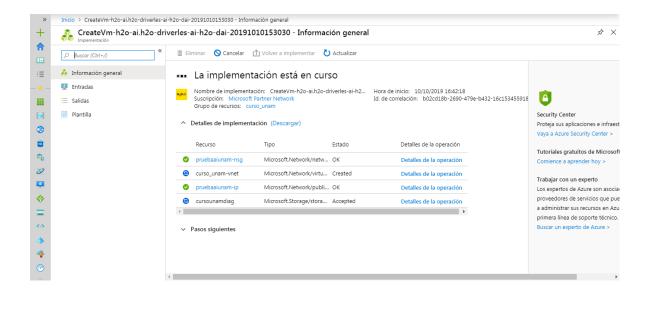

Select password as the authentication type, assign a user name and its password

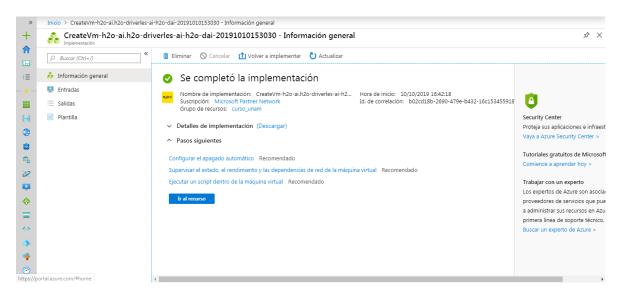

Select the administration tab and click on the automatic shutdown, assign an hour and an email to get a notification.

Go to the review tab, verify all the selected option and, if everything is okay, click on create.

Click on the Go to resource button
